

How to copy and paste text in and out of ARCADE (alpha prototype)

1. Start your ARCADE session

The red arrow indicates the button to press for step 2 below

2. Click the small triangle at the left of the screen to open the hidden menu, then select the Clipboard application

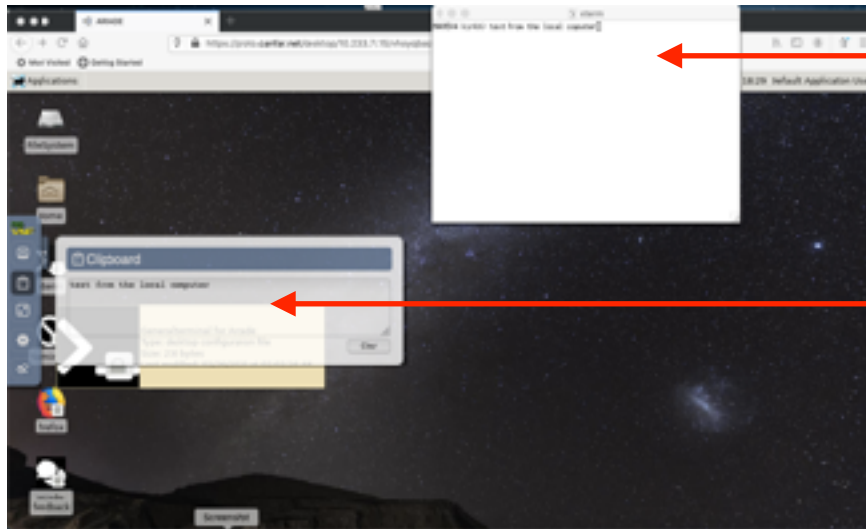

The menu circled in red appears after clicking on the triangle as above.

The second button down in the panel (red circle) starts up the Clipboard.

Copying text into ARCADE from your local machine:

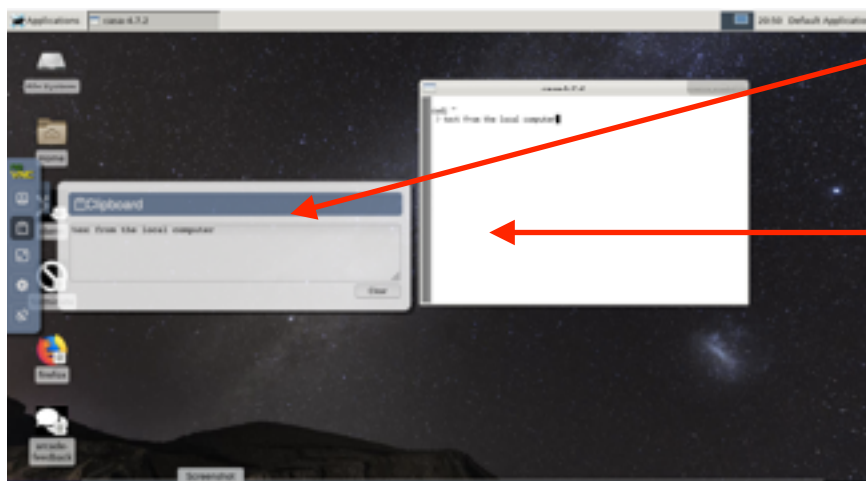

- a. Copy and paste the text into the clipboard as you would normally (e.g., using cntrl-C and cntrl-V on a linux/windows machine, or cmd-C and cmd-V on a mac).

Terminal on local machine with text to copy into ARCADE. Highlight text, press cntrl-C or cmd-C to copy it.

Click on the clipboard, press cntrl-V or cmd-V to paste in the text.

- b. Copy and paste the text from the clipboard into your desired ARCADE container, for example, a CASA container: here, you use cntrl-shift-C and cntrl-shift-V for copy and paste.

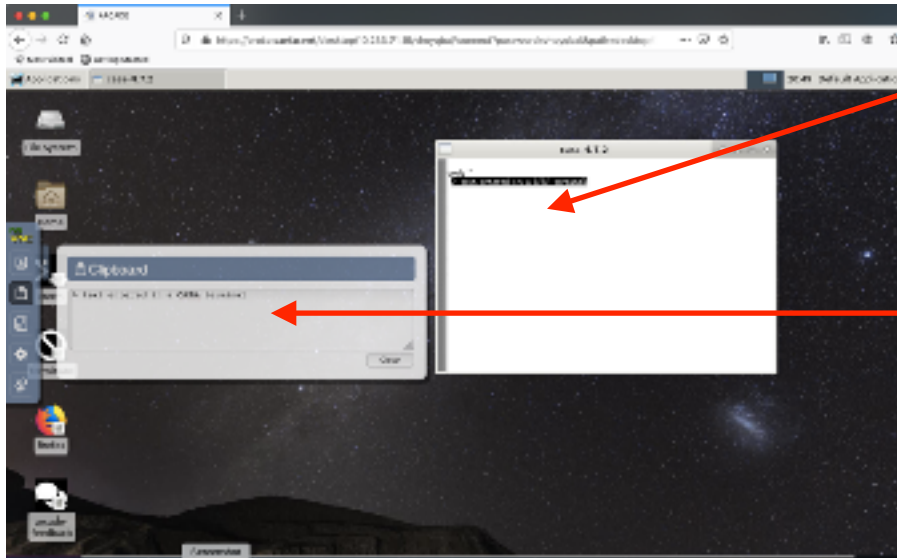

Highlight the text in the clipboard, press cntrl-shift-C to copy the text.

Click on your ARCADE terminal (example shows a CASA 4.7.2 terminal), and press cntrl-shift-V to paste in the text.

Copying text from an ARCADE terminal to your local machine:

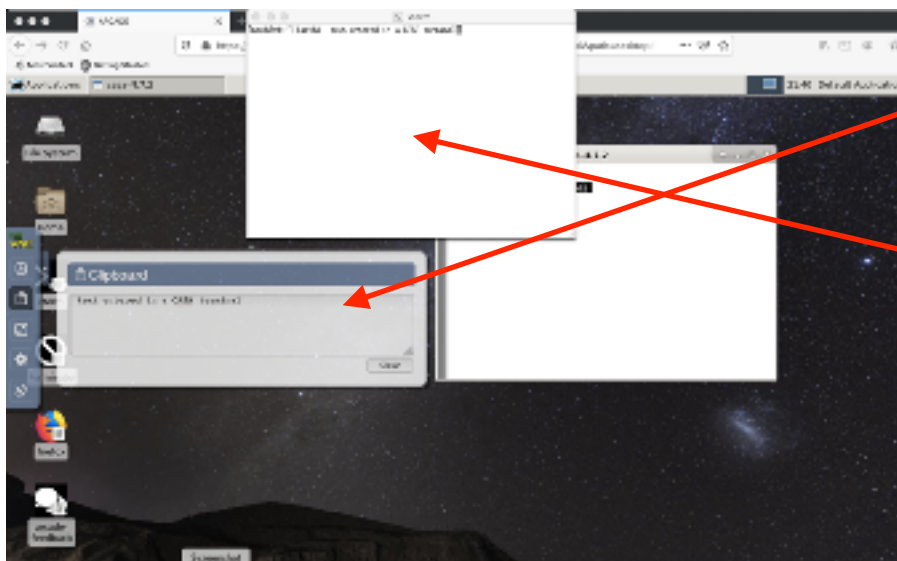

- a. Highlight the text in your ARCADE terminal, and it will automatically appear in the clipboard

Highlight the text you want to copy in your ARCADE terminal (here a CASA 4.7.2 terminal)

Text automatically appears in the clipboard

- b. Highlight and copy from clipboard to desired source on your local machine as usual

Highlight text in the clipboard

Copy text to the desired location on your local machine. In this example, the text is copied into a terminal by right-clicking in the terminal.
